***SKLIDE**

SMART
FUN
SAFE

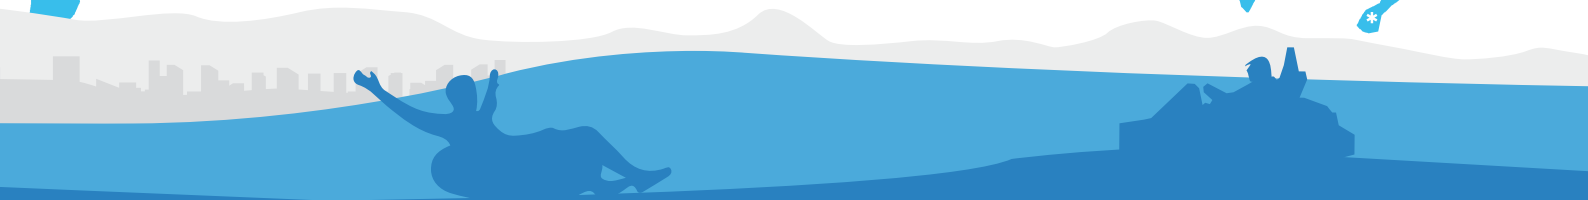

We have been manufacturing Neveplast patented ski slopes in synthetic surface since 1998, in order to realize the dream of practicing winter sports anywhere, all year round, at low cost and using normal equipment. Thanks to its experience with more than 2,300 installations worldwide, Neveplast supports customers from concept to realization of the tracks, recommending tailored and feasible solutions. We create turn-key projects with customers that meet their specific needs.

WORLDWIDE LEADER IN
SKI SLOPES AND SUMMER TUBING

on quality innovation research

SPORT

The Sports line was created with the intention to broaden the winter sports (alpine skiing, snowboarding, cross country skiing), which may be practiced even in the summer.

ALPINE - FREESKI

Alpine skiing – snowboarding – telemark

XCOUNTRY

Nordic skiing – free and classic technique

LIFT

Loading and unloading areas

Ideal for:

ENCOURAGE A SPORTS CULTURE

raising the awareness of sports for educational purposes

TOURIST PROMOTION

for facilities that want to enrich attractions for tourists

COMPETITIVE PRACTICE

to meet the needs of professionals to train no matter the weather

NEVEPLAST PRODUCTS

FUN

The Fun line responds to the growing leisure sector demand for appealing attractions characterized by low operating costs and high emotional impact.

SKLIDE: NEVEPLAST'S NEW FRONTIER FOR FUN

Neveplast's new attraction is called SKLIDE, and, as the name - resulting from the combination of SKI and SLIDE - suggests, it is the result of the know-how developed by the company, in many years of experience in the SKI and FUN sector.

A product with a fresh and innovative soul, which is characterized by its simple architecture, that ensures a healthy and intuitive fun.

Sitting in an upright or semi-upright position on the SKLIDE - a colourful sledge- with a "joystick" on the centre - the pilot drives the Skidebob.

The stick serves as a support, and also to help steer the sledge and adjust its trajectory, becoming one of the strengths of this sledge. What child doesn't dream of getting on a vehicle with a captivating design, and launch themselves down a slope, challenging their friends on parallel tracks, trying to shave off hundredths of seconds on every lap, like a true pilot?

Fun aside, the option to brake autonomously - since the legs are free to move and the centre of gravity is low - make this driving experience very safe.

SKLIDE IS FUN AND SAFE!

SHORT TRACKS, MANY LAPS

One of SKLIDE's strengths is surely the slopes layout: parallel, with the same length, one next to the other. This special configuration allows for head-to-head challenges, typical of parallel tracks, adding even more adrenaline and entertainment to this format.

The main attraction is the SKLIDE track, with many parallel lanes, in which the sliding surfaces are made up of the innovative NP30 FREESKI, Neveplast's latest addition, with marked sliding and resistance characteristics, ensure under any weather and environmental condition.

"Short tracks, many laps" this is the leitmotif behind the SKLIDE system, which translates into the customer's satisfaction, who can count on an excellent hourly capacity and joy of the end user - the child and their family - who can enjoy many independent descents with their SKLIDE.

The characteristics of this light, easy to transport sledge allow kids - after completing their descent - to get back on top, without the need for a belt conveyor.

VERY EASY TO ASSEMBLE AND CUSTOMIZABLE

Sklide is easy and quick to assemble.
It can be easily assembled by operators, without
Neveplast's support.

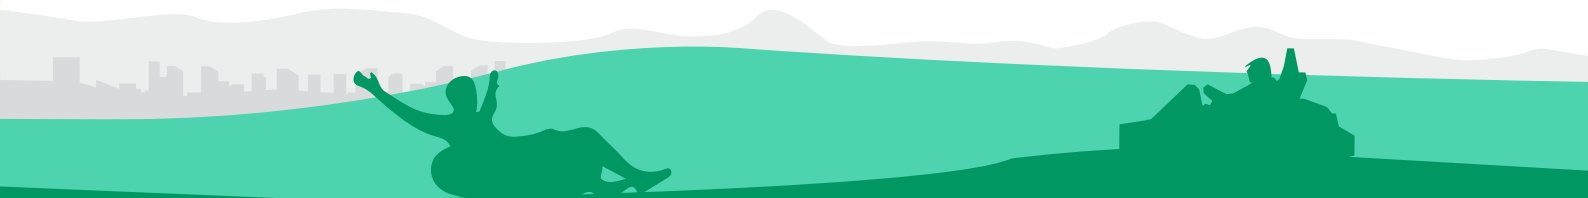

For its installation, SKLIDE requires well-prepared soils,
without counter-slopes, and other smooth surfaces with
an incline between 8 and 15% plus a flat deceleration
and arrival area.

Our extensive know how helped us fully meet our
customers' demand, who are increasingly seeking for

new ways to tell their story, which is never the same as
anyone else's.

With SKLIDE, we can offer a tailored-made product,
in terms of size, track colour and design, reflecting the
needs and nature of our customers.

Neveplast supports its customer in the design, creation,
assembly and after-sales phases, by providing the ideal
solutions for a guaranteed success.

SKLIDE IS FUN AND SAFE!

KIDS FRIENDLY AND ECO-FRIENDLY

SKLIDE is suitable for all ages, especially children from 4 years old and up.

SKLIDE is environmentally-friendly fun, since this attraction works with the "pilot's" driving force, using the land slope. In short, this attraction is non-polluting, does not require electricity or water to work, and can be added to every context in a completely environmentally-sustainable way.

small spaces • 100% safe • customer assistance

We believe that making excellent products is essential. However, it is equally important to offer an efficient and punctual service. This is why we take particular care over the production, delivery and materials assembly phase.

Also, thanks to active and constant relationships management, we focus on the expectations of our customers and make every effort to fully satisfy them, providing a complete “turnkey” service.

NEVEPLAST ASSISTANCE

PRE SALE

Our team of expert designers guide you during all the definition phase, recommending the ideal solution according to your needs, structural feasibility and expected performance levels.

We ensure the following for customers:

PROJECT FEASIBILITY STUDIES
DESIGN
FAST AND PRECISE REALIZATION TIMES

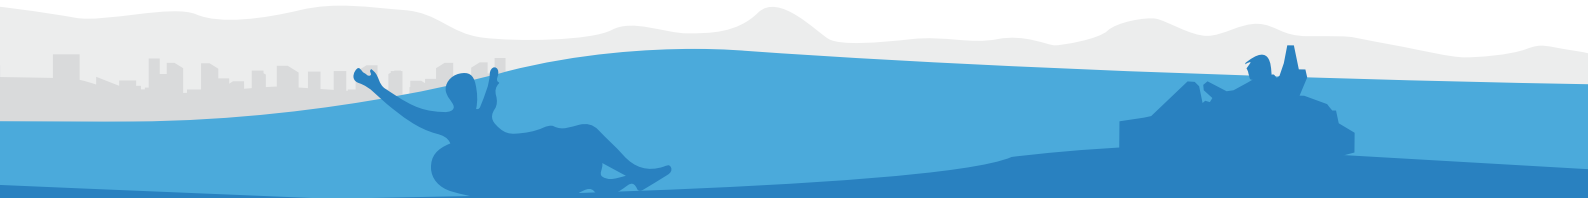

AFTER SALE

Neveplast technicians will support your workers in the installation of the track on site, ensuring precise and accurate assembly in short timescales.

We provide:

SUPPORT AND ASSISTANCE DURING INSTALLATION
AND THE OPENING OF A FACILITY UNTIL FINAL
COMPLETION OF EVERY DETAIL

ON-SITE TRAINING AND TECHNICAL TIPS FOR
PROPER OPERATION AND MAINTENANCE.
